DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

These claims are not enabled because the specification fails to define or disclose to one of ordinary skill in the art how to make the fabric have a "percent fabric surface occupancy of warp as a constituent of the fabric is 90% to 110% and the weft as a constituent of the fabric is 40% to 80%." Although the specification provides a preferred yarn denier, neither the warp density nor the weft density is taught in the present disclosure. For instance, a fabric having 10 warps/inch versus one with 30 warps/inch would give a completely different surface occupancy. Therefore, the claims are not enabled. Furthermore, a proper search of the prior art cannot be done because the Examiner is unable to compare the fabric of the present invention to prior art references without knowing the weaving density of the present invention and how it is obtained.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1771

4. Claims 3 and 4 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 3 and 4 recite the limitation "the fibers" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Manabe et al. (US 4,816,124) is believed to be pertinent because it discloses a metal coated plain weave fabric. Takagi et al. (US 5,981,409) is believed to be pertinent because it discloses fabric for dust-proof clothes wherein the fabric is a plain weave fabric and the warp yarns occupy 60-90% of the fabric surface, but fails to disclose that the weft comprises 40-80% of the fabric surface.
